

Cross-section from three boreholes

SYNTHETIC DATA | common local elevation datum | dashed contacts are interpretations

Same material description does not prove continuity. Review alternative correlations.

Hole	Distance (m)	Ground elev. (m)	Clay top depth (m)	Clay top elev. (m)
BH-01	0	100.0	3.0	97.0
BH-02	50	102.0	4.0	98.0
BH-03	100	101.0	4.0	97.0

Elevation = ground elevation - vertical depth below ground.

All holes are vertical and lie on this synthetic alignment.

Dashed connections are one interpretation, not observations between holes.

Use a stated horizontal/vertical scale and review any vertical exaggeration.
